**WORKSHOP**  
**April 13, 2015**  
**10:00 - 18:00**  
**Bilgi Paylaşım Derneği / Taksim**

**The superluminal tachyon energy and the exploration of reality**

Hundreds of years ago, Luigi Galvani , a professor of anatomy at Bologna University in Italy, got the idea that a human being is an electrical field within a larger electrical field which we call biological life .Galvani became convinced that electricity was the driving force behind the motor function, nervous system and brain of the body; that animal electricity was the life – force itself.

Since the XIX century we study the effects of the electricity and specifically that the electric and electromagnetic fields are interconnected.

Today we know that tachyonic fields play an important role in modern physics. The tachyon field is part of the quantum field. Working with this energy could influence and modify the other fields.

The Terra Tachyon team can be truly regarded as the pioneer in the tachyon research, since this energy has been studying since the 90s. Initially the founders were engaged mainly in investigating the mystery of tachyon energy. At a later stage they also began to develop products. The director and author of the workshops, Robert Munck represents Terra Tachyon « More often we accept the idea that everything is interconnected. Spiritual traditions have always known this , and now this is confirmed by quantum physics. In high energy physics is tachyons are at the core of debates, and it looks like researchers, and perhaps mankind, are prepared to glimpse behind the veil which is the speed of light. " Now tachyon energy is becoming increasingly important: "Thanks to its unusual properties, tachyon energy can make us aware of how we perceive reality and mold it. At some moment, we have all wondered, "Why do I always find myself in similar situations? Why am I not happy? Why do I feel alone ? What is the purpose of my life? "Such questions are

regarding our self, our dreams and our conditioning. The tachyon energy reminds us that we can address them. "

To make accessible this interactive energy, Terra Tachyon has been manufacturing products since 1996: "I'm interested in the practical application of this form of energy on Earth. We are here in our body to develop, learn and express our spiritual heritage in and through our bodies. The simple and practical use of this energy in relation to the opportunity to dive ever deeper into the mystery of our true Self has always been my concern. "

The new series of seminars to begin in 2014 are entitled "Omnipresence of tachyons in our reality". "Everyday life - explains Robert Munck- makes us forget that we are energy beings. We can look at reality from a scientific point of view or from a spiritual point of view. However, we can and should look at the similarities between science and spirituality, instead of maintain them separated in an artificial way. The contents of the seminar reminds us that our being is not limited by the speed of light, and there is much to explore both externally and internally. It also reminds us that we are curious beings who enjoyed learning and having new experiences, and we can use tachyons to mold and consciously perceive our reality. "

Tachyon Seminar  
(no requisit)

What are tachyons?

How do tachyons work?

What does exposure to tachyon energy feel like?

Colors and shapes specificities

How to choose (one) Terra Tachyon products

How to use them

Product applications

Practical exercices with different Terra Tachyon objects

Practical exercice «Intuition and Tachyons»

Working with the Tachyons for yourself and to help others.

Benefits and range of applications
